

Listing of Claims

The following listing of claims replaces all prior versions and listings of claims in the application.

1. (Currently amended): A security document that includes, as security element against two-sided copying, printed indicia present on the front side and on the reverse side that are observable in reflected light and form an image that can be observed in transmitted light, ~~characterized in that~~ wherein said printed indicia comprise lines and form said image with a 3D effect.
2. (Currently amended): The security document as claimed in ~~the preceding claim 1,~~ ~~characterized in that~~ wherein the lines are of variable number density per unit of area and/or variable printing intensity so as to create the 3D effect.
3. (Currently amended): The security document as claimed in ~~one of the preceding claims~~ claim 1, ~~characterized in that~~ wherein the lines are made from broken lines, in particular discrete dots.
4. (Currently amended): The security document as claimed in ~~one of the preceding claims~~ claim 1, ~~characterized in that~~ wherein the lines are present in large number and are very fine.
5. (Currently amended): The security document as claimed in ~~one of the preceding claims~~ claim 1, ~~characterized in that~~ wherein the printed indicia consist entirely of such lines.
6. (Currently amended): The security document as claimed in ~~one of the preceding claims~~ claim 1, ~~characterized in that~~ wherein the lines are alternately on the front side and on the reverse side, in particular alternating successively on the front side and on the reverse side.

7. (Currently amended): The security document as claimed in ~~one of claims 1 to 5~~ claim 1, ~~characterized in that~~ wherein the lines are represented in series, one series of lines being on the front side and its complementary series on the reverse side.

8. (Currently amended): The security document as claimed in ~~either of claims 1 and 2~~ claim 1, ~~characterized in that~~ wherein the printed lines on the front side and on the reverse side are identical and superposed.

9. (Currently amended): The security document as claimed in ~~one of the preceding claims~~ claim 1, ~~characterized in that~~ wherein the lines are generated by an algorithm.

10. (Currently amended): The security document as claimed in ~~one of the preceding claims~~ claim 1, ~~characterized in that~~ wherein the printed indicia, in particular the lines, include an encryption.

11. (Currently amended): The document as claimed in ~~one of the preceding claims~~ claim 1, ~~characterized in that~~ wherein the lines are black and/or in various shades of gray and/or in color and/or change appearance depending on the viewing angle or under the action of an excitation source, such as radiation, specially fluorescent, thermochromic or photochromic ones, and/or have electromagnetic properties, especially electrically conducting, magnetic or magnetic resonance properties.

12. (Currently amended): The security document as claimed in ~~one of the preceding claims~~ claim 1, ~~characterized in that~~ wherein it includes, as support, a paper with a region of reduced opacity and in that said printed indicia are present on the front side and on the reverse side in said region of reduced opacity.

13. (New): The security document as claimed in claim 8, wherein the lines are generated by an algorithm.

14. (New): The security document as claimed in claim 8, wherein the printed indicia, in particular the lines, include an encryption.

15. (New): The document as claimed in claim 8, wherein the lines are black and/or in various shades of gray and/or in color and/or change appearance depending on the viewing angle or under the action of an excitation source, such as radiation, specially fluorescent, thermochromic or photochromic ones, and/or have electromagnetic properties, especially electrically conducting, magnetic or magnetic resonance properties.

16. (New): The security document as claimed in claim 8, wherein it includes, as support, a paper with a region of reduced opacity and in that said printed indicia are present on the front side and on the reverse side in said region of reduced opacity.

17. (New): The security document as claimed in claim 2, characterized in that the printed lines on the front side and on the reverse side are identical and superposed.

18. (New): The security document as claimed in claim 17, wherein the lines are generated by an algorithm.

19. (New): The security document as claimed in claim 17, wherein the printed indicia, in particular the lines, include an encryption.

20. (New): The document as claimed in claim 17, wherein the lines are black and/or in various shades of gray and/or in color and/or change appearance depending on the viewing angle or under the action of an excitation source, such as radiation, specially fluorescent, thermochromic or photochromic ones, and/or have electromagnetic properties, especially electrically conducting, magnetic or magnetic resonance properties.
